

VESDA SENSEPOINT XCL (LARGE & MICRO BORE) UPGRADE PROGRAM

Xtralis is pleased to announce an upgrade program to the thousands of VESDA ECO gas detectors with the new generation VESDA Sensepoint XCL – Large Bore gas detectors.

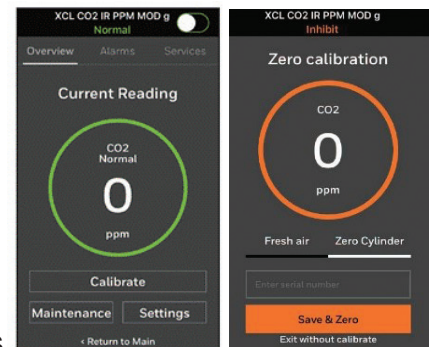

VESDA ECO detectors have been widely deployed into many different applications and environments around the globe. Due to the ageing install base of VESDA ECO, Xtralis is offering a 15% discount on the purchase of any VESDA Sensepoint XCL – Large Bore detectors to upgrade any legacy VESDA ECO (standard version) detectors for all gas types excluding Sulphur Dioxide (SO₂).

This incentive program ALSO extends to all VESDA and FFAST FLEX installations that may benefit from the addition of the VESDA Sensepoint XCL (Large and Micro Bore) gas detection capability to the pipe network.

This incentive program is effective immediately until 31st December 2024.

The VESDA Sensepoint XCL – Large and Micro Bore are the latest generation of aspirated gas detectors offering the following benefits:

- Detector quality and reliability backed by Honeywell Analytics with +40 years' experience in the gas detection market
- Convenient access to the detector from a smart device (Bluetooth) – no physical connection required
- Easy and quick configuration and maintenance from your smart device reducing setup and operating cost
- Improved reporting with direct access to detector diagnostics from a smart device and the ability to generate and share reports (configuration, maintenance) on the spot

For additional information, refer to the VESDA Sensepoint XCL – Large Bore Data Sheet (Doc. # [35553](#)), and the VESDA Sensepoint XCL - Micro Bore Data Sheet (Doc. # [33770](#)).

Please contact your local sales representative about the benefits of this upgrade program.

The AD SEA discount approval process shall be used to request the discount.
