

Xenon first announced
his retirement in 1999.

It's time to let him retire
gracefully...

The Xenon range of smoke detectors are a proud part of Xtralis's history, but they are no longer supported and are operating outside of the original specification.

The risks of not upgrading your Xenon detectors:

- ✗ The Xenon detector requires regular maintenance and replacement of serviceable parts, but these parts were discontinued years ago.
- ✗ Every Xenon detector requires a yearly calibration service, which is no longer provided.
- ✗ Life safety, building, assets and business continuity are all at risk of fire.
- ✗ There is a risk of non-compliance with insurance requirements, building codes and regulations.

Let the next generation take over and reap the rewards...

The current Xtralis VESDA range of smoke detectors offer numerous benefits over its predecessor:

- ✓ Very early warning smoke detection capability with adjustable thresholds and multiple alarms.
- ✓ Lower cost of ownership due to fewer replaceable parts and technology which protects the sensitive optical components of the system.
- ✓ VESDAnet capability allowing centralize and remote commissioning, monitoring and reporting.
- ✓ Self-diagnosis of faults and maintenance requirements.
- ✓ Advanced monitoring software and integration capabilities.

For more information on this program or to discuss an incentive for retiring competitor products under this scheme, please contact your local Xtralis office.
