Open-area Smoke Imaging Detection (OSID) by Xtralis is a new innovation in projected beam smoke detection technology. By using advanced dual wavelength projected beams and optical imaging technology for early warning smoke detection, OSID provides a low-cost, reliable and easy-to-install solution that overcomes typical beam detection issues such as false alarm incidents and alignment difficulties.

Unique Detection Technology
The OSID system measures the level of smoke entering beams of light projected over an area of protection. A single OSID Imager can detect up to seven Emitters to provide a wide coverage area. Two innovations in smoke detection technology have been developed for the revolutionary OSID smoke detector:

Dual Wavelength Particle Detection
The beam projected from each Emitter contains a unique sequence of ultraviolet (UV) and infrared (IR) pulses that are synchronised with the Imager and enable the rejection of any unwanted light sources.

By using two wavelengths of light to detect particles, the system is able to distinguish between particle sizes. The shorter UV wavelength interacts strongly with both small and large particles while the longer IR wavelength is affected only by larger particles. Dual wavelength path loss measurements therefore enable the detector to provide repeatable smoke obscuration measurements, while rejecting the presence of transient dust particles or solid intruding objects.

Optical Imaging with a CMOS Imaging Chip
An optical imaging array in the OSID Imager provides the detector with a wide viewing angle to locate and track multiple Emitters. Consequently, the system can tolerate a much less precise installation and can compensate for the drift caused by natural shifts in building structures.

Optical filtering, high-speed image acquisition and intelligent software algorithms also enable the OSID system to provide new levels of stability and sensitivity with greater immunity to high level lighting variability.

Operation
Status information (Fire Alarm, Trouble and Power) is communicated through the Imager via Status LEDs, dedicated Trouble and Alarm relays, and the Remote Indicator interface. Specific Trouble (Fault) conditions are identified through coded flashes of the Trouble LED.

An internal heating option is also provided on the Imager to prevent condensation on the optical surface, and a reset input enables an external signal to reset the device.

Simple Installation and Maintenance
The OSID system consists of up to seven Emitters for the 90° Imager unit, located along the perimeter of the protected area, and an Imager mounted opposite. Each component can be mounted directly to the surface or can be secured with the supplied mounting brackets. Battery powered Emitters with three or five years battery life are also available to reduce installation time and cost.

On the Imager, a termination card provides all field wiring terminals, and DIP switches enable the user to configure the detector for particular applications.

Features
- Maximum detection range of 200 m (656 ft) for the OSI-10
- Dual wavelength LED-based smoke detection
- Optical imaging with CMOS imaging chip
- On-board event log for fault and alarm diagnostics
- High tolerance to false alarm due to building movement
- High tolerance to transient dust, steam and intrusion of solid objects
- Easy alignment with large adjustment and viewing angles
- No need for precise alignment
- Tolerant of alignment drift
- Automatic commissioning in under ten minutes
- Simple DIP switch configuration
- Simple and easy maintenance requirements
- Three selectable alarm thresholds
- Status LEDs for Fire, Trouble and Power
- Conventional alarm interface for straightforward fire system integration

OSID Smoke Detection

Alignment of the Emitter is simply achieved using a laser alignment tool to rotate the optical spheres until the laser beam projected from the alignment tool is close to the Imager. The Imager is aligned in a similar way so that its Field of View (FOV) encompasses all Emitters. A Trouble or Fault will be indicated if an Emitter is missing or outside the Imager field of view.

The OSID system is highly tolerant to transient dust and dirt and requires little maintenance in practice. Preventative maintenance is limited to occasionally cleaning the optical faces of the detector components.

The Emitters are equipped with an onboard event memory for diagnostic purposes. Connecting the OSID Diagnostic tool allows users to download this memory log for further alarm and fault analysis and troubleshooting.

Configuration Options for EN54-12 Installations

OSID systems may be configured to suit a range of detection spaces by selecting the number of Emitters and type of Imager. Each type of Imager differs by the lens used in the unit, which determines the field of view and range of the system.

**Specifications**

**Supply Voltage**

- 20 to 30 VDC (24 VDC nominal)

**Imager Current Consumption**

- Nominal (at 24 VDC): 8mA (1 Emitter)
- 10mA (7 Emitters)

**Peak** (at 24 VDC) during training mode: 31mA

**Emitter Current Consumption**

- Wired Version (at 24 VDC): 350μA Std Power, 800μA High Power
- Battery Version (1.9 - 3.2 VDC):
  - OSE-RBA Built-in Battery:
    - SP Version: 5-year battery life
    - HP Version: 3-year battery life

**Battery life time only valid for use at room temperature**.

**Field Wiring**

- Cable Guage: 0.2 - 4mm² (26-12 AWG)

**Alarm Threshold Levels**

- Low: Highest sensitivity / earliest alarm: 20% (0.97 dB)
- Medium: Medium sensitivity: 35% (1.87 dB)
- High: Low sensitivity: 50% (3.01 dB)
- Industrial Mode: 65% (4.56 dB)

**Do not use Heater nor Dust Rejection if OSI-90 is set at 65% sensitivity.**

**Adjustment Angle**

- ±60° (horizontal)
- ±15° (vertical)

**Maximum Misalignment Angle**

- ±2°

**Dimensions (WHD)**

- Emitter / Imager: 208 mm x 136 mm x 96 mm
- (8.19 in. x 5.35 in. x 3.78 in.)

**Operating Conditions**

- Temperature: -10°C to 55°C (14°F to 131°F)*
- Humidity: 10 to 95% RH (non-condensing)
- Please consult your Xtralis office for operation outside these parameters.

**Storage Conditions (non-operational)**

- Humidity: Dry (<95%)
- Temperature: 0° to 85° C
- Must not exposed to sunlight or other radiation sources.

**IP Rating**

- IP 44 for Electronics
- IP 66 for Optics Enclosure

**Status LEDs**

- Fire Alarm (Red)
- Trouble / Power (Bi-color Yellow / Green)

**Event log**

- 10,000 events

**Color**

- White, RAL9003

**Approvals Compliance**

Please refer to the Product Guide for details regarding compliant design, installation and commissioning.

* Product UL listed for use from 0°C to 37.8°C (32°F to 100°F)
