About Xtralis

Xtralis is a leading global provider of powerful solutions for the early and reliable detection and remote visual verification of smoke, fire, and gas threats. Our technologies prevent disasters by giving users time to respond before life, critical infrastructure or business continuity is compromised. We protect high-value and irreplaceable assets belonging to the world's top governments and businesses.

Xtralis has been a pioneer in life safety innovations for more than 30 years. We are the world's largest manufacturer of very early warning Aspirating Smoke Detection (ASD) systems, including VESDA, the world's leading ASD brand. With more than 230 patents (granted or pending) and numerous firsts and innovations in our technology portfolio, Xtralis leads the market in very early warning fire detection (VEWFD).

The award-winning Xtralis portfolio includes:

- VESDA-E ASD
- VESDA ASD
- Industrial VESDA VLI ASD for Industrial Applications
- ICAM Flexible ASD
- OSID Open-Area Smoke Detection
- 6500 Beam Detection
- Li-ion Tamer GEN 3

ABOUT XTRALIS

Safety Products

Xtralis is the inventor and pioneer of VESDA ASD technology and remains the world's leading supplier of ASD systems. Top governments and businesses around the globe rely on Xtralis for technically superior life safety solutions to protect people, critical infrastructure and high-value or irreplaceable assets.

VESDA-E: The Next Generation of ASD

VESDA-E is the next generation of ASD from Xtralis. VESDA-E offers ultra-sensitive ASD; 15 times better than current VESDA models with double the longevity, improved dust rejection, and 8% less power consumption per unit area. VESDA-E VEA introduces pinpoint addressability to deliver situational awareness to improve response time and efficiency for up to 40 locations. Other advanced features, including StaX expansion modules, add capabilities like gas detection for enhanced detection and monitoring, and remote field programmability. VESDA-E is the most advanced, reliable, and flexible ASD system ever.

Very Early Warning Smoke Detection

Xtralis provides highly reliable smoke detection at the earliest presence of fire while discriminating against false alarms. Conventional fire detection does not offer adequate protection because toxic smoke can begin to spread, and fire damage can occur before a warning is issued. In contrast, Xtralis' VESDA ASD systems continuously sample the air for the smallest traces of smoke to provide valuable time to understand a threat and stage an intelligent response. Our powerful life safety solutions provide reliable smoke detection in zero-tolerance environments, adhering to the highest safety standards and mitigating risks to facilities, assets and personnel.

Gas Detection and Environmental Monitoring

Xtralis offers more than just fire detection solutions. Our VESDA ASD systems can be extended to include gas detection and environmental monitoring. VESDA Sensepoint XCL is a gas detection solution that utilizes the ASD pipe network to deliver superior gas detection via multiple hole (multi-point) sampling. The combined solution provides reliable detection of gases for occupant protection and process monitoring whilst simultaneously ensuring protection against fire threats.

Li-ion Tamer GEN 3 system provides the earliest detection of failing lithium-ion batteries (detection of battery electrolyte vapours), well in advance of smoke and conventional gas detectors. With early warning of the initial signs of failing lithium-ion batteries, proper mitigation steps can be taken to prevent progression to a catastrophic thermal runaway.

Li-ion Tamer Sensor Multi Output Solution (MOS) is a device that detects the initial venting of battery electrolyte solvent vapours (off-gassing phase) that occurs early in the failure mode of lithium-ion batteries. The early detection of such events allows proper mitigation steps to be taken to avoid a catastrophic thermal runaway failure. It is also capable of detecting hydrogen gas, which is generated during thermal runaway of lithium-ion batteries. The detection of hydrogen allows proper management of flammable gas accumulation to avoid explosive conditions.

Open-area Smoke Detection

Fire detection for buildings with open spaces presents unique challenges, and very early warning may not always be the priority. When only standard sensitivity detection is required, Open-area

Smoke Imaging Detection (OSID) offers the most reliable and cost-effective smoke detection solution for open spaces. It delivers superior performance to overcome all of the shortcomings inherent to other detection systems currently used in these applications such as beam, heat and flame detectors.

Video Image Fire Detection

The Failsafe Thermography Detector (FTD) is a bi-spectral (IR & Visual) smart edge device that has been specifically designed for early warning heat-detection.

The thermography detectors provide fire detection solutions where traditional smoke/fire detectors cannot cope with high smoke and dust conditions as part of normal operating conditions.

VESDA-E The Next Generation of VESDA Aspirating Smoke Detectors (ASDs)

Innovative Capabilities

Since pioneering ASD technology more than 30 years ago,VESDA has been recognized as the best in the world, protecting personnel, irreplaceable assets and mission critical infrastructure in the world's most iconic locations.

VESDA-E is the next-generation of ASD technology, featuring multiple innovative capabilities across the new portfolio that delivers a new level of customer experience:

- **VESDA Smoke+**, offers increased sensitivity – up to 15 times greater than VESDA VLP, at least three times better dust rejection, up to twice the longevity while maintaining consistent sensitivity over time and up to 8% less power consumption per unit area.
- **VESDA Flex**, future proof expandability and programming for maximum flexibility using, StaX Hardware expansion modules that easily bolt onto the VESDA-E detector to add additional capabilities.
- **VESDA Verify**, VESDA-E VEA introduces pinpoint addressability to deliver situational awareness to improve response time and efficiency for up to 40 locations.
- **VESDA Connect**, allows for flexible networking and programming options that reduce maintenance and monitoring costs through extensive connectivity options and remote diagnostics tools including Ethernet, USB, VESDAnet and Relays.
- **VESDA TCO**, reduces the Total Cost of Ownership (TCO) through Capex value, Opex savings, Plug'n'Play installation, design-less pipe networks, vast monitoring options and backwards compatibility. With VESDA-E you can reduce TCO by up to 15% for non-addressable products and up to 60% for the point addressable products.

How VESDA-E Works

Air is continually drawn from the protected area through the air sampling pipe network and into the detector by a high efficiency aspirator. The air sampling pipe network can contain up to four pipes. The air from each sampling pipe passes through an airflow sensor and then a sample of the air is drawn into the smoke detection chamber via the sampling module, after first passing through the filter. An additional filter provides clean air to protect the optical surfaces inside the detection chamber from contamination.

The Flair™ detection chamber uses CMOS imaging, multi-directional light scattering and sophisticated algorithms for smoke detection and particle type characterization. If the detected smoke is higher than the set alarm thresholds it is reported as an Alert, Action, Fire1 or Fire2 alarm condition. Air is exhausted from the detector and may be vented back into the protected zone. Alarms can be signaled via Relays and VESDAnet. Ethernet can be used for configuration and secondary monitoring, and a USB interface is provided for initial setup. A series of LEDs display Alarm, Trouble, Disable and detector power on status. A button allows the user to Reset or Disable the detector. In addition, an optional 3.5" LCD display shows the detector status, including smoke level and a smoke level bar graph, alarm thresholds, trouble status, % airflow level, normalization status and filter life used.

VESDA-E Product List

VESDA-E VEU	
	The VEU series of ASDs are the premium detector of the VESDA-E range. An ultra-wide sensitivity range; 15 times greater than VESDA VLP, and provision for more sampling holes provide an increased coverage in high airflow applications by at least 40%. Considerably longer linear pipe runs and extended branched pipe network configurations cater perfectly to applications with higher ceilings providing an increased coverage by up to 80% whilst allowing convenient detector mounting for ease of service and maintenance. A range of revolutionary new features provide unsurpassed detection performance, flexibility, field programmability, connectivity and reduced TCO.

VESDA-E VEP	
	The VESDA-E VEP series of smoke detectors bring the latest and most advanced detection technology to provide very early warning and the best nuisance alarm rejection to a wide range of applications. Built on the Flair detection technology and years of application experience, VEP detectors deliver absolute calibration for lifetime performance and a range of revolutionary new features that deliver user value.

VESDA-E VES

The VESDA-E VES includes a valve mechanism in the inlet manifold and software to control the airflow from four Sectors (pipes). This configuration enables a single zone to be divided into four separate sectors. The VES enables the user to locate the source of smoke by identifying the first sector to reach the Alert level. The detector then continues to sample from all sectors to monitor fire growth and will report separate alarm levels for each sector. The VES provides four individually configurable alarm levels (Alert, Action, Fire 1 and Fire 2) for each sector allowing optimum protection in a wide range of applications.

VESDA-E VEA

The VESDA-E VEA series of detectors combine VESDA reliability and early warning smoke detection with pinpoint addressability and a variety of annunciation options that truly surpass traditional spot detectors. VEA uses patented sampling points and multi-channel microbore air-sampling with enhanced or standard alarm sensitivity setting for the sampling points. As a multi-channel addressable system, the VEA detector is able to divide a protected space into sampling locations, enabling the localization of a fire for faster incident response. VEA is suitable for the protection of areas where pinpoint location of fire events is essential, thus providing ideal fire detection solutions for offices, hospitals, schools, prisons, multi-story dwellings, cabinets in data centers and warehouse racks. A wide range of features provide flexibility, enhanced connectivity and reduced TCO.

VESDA-E Remote Accessories

The VESDA-E Remote Accessories are the next generation of ancillary devices designed to complement VESDA-E ASDs and provide primary reporting and remote monitoring of new and existing VESDA systems over VESDAnet. These remote modules are commonly used in large and restricted access areas to allow remote monitoring with added convenience and ease.

The remote modules consist of the following configurations:

- 3.5" Display with or without relays
- 7 or 12 Relays without Display
- VESDAnet, Ethernet and USB Connection

The remote modules are designed to be assembled, on site, onto a 19" subrack which accommodates up to 4 remote modules. The highly flexible subrack configuration is enabled by a modular ordering system for expedient out-of-box installation in the field.

Detector Enclosures

Product Name and Image	Ordering Code	Description
Detector Enclosure	020-050-E	This IP66enclosure is built to accommodate either a VESDA-E VEU, VESDA-E VEP, VESDA-E VES or VESDA VLF detector. The enclosure has a hinged door for easy access for installation and maintenance which includes a glass window to view the onboard display. It includes predrilled holes for inlet and exhaust ports and cable entries so that installation of a detector is a simple process requiring minimum tools. Moreover the enclosure is supplied with pipe fitting to ensure that the IP66 integrity of the enclosure is maintained.

VESDA ASD

The World's leading ASD Brand

VESDA very early warning smoke detection solutions provide the earliest possible warning of an impending fire hazard. VESDA buys time to investigate an alarm and initiate an appropriate response to prevent injury, property damage or business disruption. And because VESDA has the industry's widest sensitivity range and multi-level warnings, even minute levels of smoke can be detected before a fire has time to escalate. As the leading ASD brand specified by fire professionals around the world, VESDA is synonymous with reliable, high performance fire detection.

How VESDA Works

VESDA works by continuously drawing air into a distributed pipe network via a high-efficiency aspirator. The air sample then passes through a dual-stage filter. The first stage removes dust and dirt from the air sample before it enters the laser detection chamber. The second, ultra-fine stage provides an additional clean-air supply to keep the detector's optical surfaces free from contamination, ensuring stable calibration and long detector life as well as minimizing nuisance alarms.

From the filter, the air sample goes through the calibrated detection chamber where it is exposed to a laser light source. When smoke is present, light is scattered within the detection chamber and is instantly identified by the highly sensitive receiver system. The signal is then processed and presented via a bar-graph display, alarm threshold indicators and/or graphic display. VESDA detectors are able to communicate this information to a fire alarm control panel, a software management system, or a building management system via relays or a High Level Interface (HLI).

VESDA VLI

The VESDA VLI is an industry first early warning ASD system, designed to protect industrial applications up to 2.000 m² (21.520 ft²). The VLI detector combines a patented fail-safe Intelligent Filter with Clean Air Zero and clean-air barrier for optics protection complementing absolute detection and providing longer detection chamber life all enclosed in a robust IP66-rated enclosure.

	VRT-T00	VESDA VLI Display with a remote termination card. No Relays
	VRT-Q00	VESDA VLI Display with a remote termination card. 7 Relays
	VRT-300	For remote connection to the VESDAnet.
	VRT-500	Includes blank plate with a remote mounting box. 7 Relays version for VLP, VLF, or VLC
	VRT-E00	Includes blank plate with a remote mounting box. 7 Relays version for VLS
	VRT-900	Includes blank plate with a remote mounting box. 12 Relays version for VLS
	VRT-S07	A remote termination card with new software supplied in a remote mounting box (VRT); it allows reporting of ANY alarm or fault condition that appears on a VESDAnet loop regardless of the initiating zone.

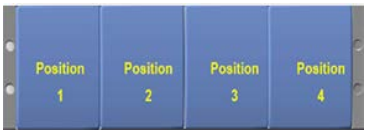
Note: All configurations include the remote mounting box, and are identifiable from a standard remote mounting box by the text on the blue cover. They can also be distinguished by the part number on the ratings label that appears on the bottom of the unit.

Detector and Subrack Enclosures

Product Name and Image	Ordering Code	Description
 19" Rack enclosure	020-055	For up to five VESDA sub racks (not included). The enclosure has a glazed lockable door and an internal swing frame to allow easy access to the back of the sub rack.

Product Name and Image	Ordering Code	Description
 19" Rack Enclosure	020-052	For up to two VESDA sub racks (not included). The enclosure has a glazed lockable door and an internal swing frame to allow easy access to the back of the sub rack.
 Detector Enclosure	020-050-E	The 020-050-E is a specific version that is built to complement the VESDA range of detectors, it accommodates either a VESDA-E VEU, VESDA-E VEP, VESDA-E VES or VESDA VLF detector.
	149-021	Single row blanking plate. Used to fill the enclosure if less sub racks are used than the enclosures maximum.

Sub Rack Configurations (VSR)



The VESDA Sub Rack can be configured in thousands of different ways.

To configure, choose a module for each of the four positions shown below. The modules will be assembled in the configuration you specify, from left to right. Position 1 is the far left position, while Position 4 is the far right.
The Sub Rack mounts on any standard 19" rack. Sub rack enclosures are also available.

Sub Rack configurations include the options for both “front” and “back” modules.

- Front module: is a display, programmer, or VESDAnet socket.
- Back modules: are remote termination cards with a variety of relay options.

To configure your Sub Rack, use the matrix that follows.

The "Empty" Sub Rack: VSR - 0000 is a 19” Sub Rack without remote modules. Once modules are added, the part number will change as appropriate. VSR - 0000 has four positions for modules. Select a module for each position from the matrix below.

Pre-configured examples:

VSR - 2100 (Code 2-1-0-0): 19” Sub Rack with 1 Standard Display with 7 - relay remote termination card in position 1 and a Programmer in position 2. Blank plates are in position 3 and 4.

VSR - 4423 (Code 4-4-2-3): 19” Sub Rack with: 2 Scanner Displays with 7 - relay remote termination cards in positions 1 and 2. A Standard Display with 7 - relay remote termination card occupies position 3 and a VESDAnet Socket is in position 4.

VSR Spare Modules

1. All programmers and displays require remote termination cards.
2. Every relay termination card requires a display or relay processor board.
3. If you are using the sub rack for remote relays only, you must have a relay processor board in each position that has a relay.

Code	Description
0	Blank plates
1	Programmer with remote termination card - no relays
2	Standard display with 7 relay remote termination card
3	VESDAnet Socket
4	Scanner display with 7 relay remote termination card
5	7 relay remote termination card and relay processor
6	Standard display with remote termination card - no relays
7	Scanner display with remote termination card - no relays
8	Scanner display with 12 relay remote termination card
9	12 relay remote termination card and relay processor
A	Programmer sharing adjacent termination card
Q	VLI display with 7 relays
T	VLI display with no relays
V	VLF display with 7 relay remote termination card
W	VLF display without relays

VESDAnet and Relay Cards

Product Image	Ordering Code	Description
	VIC-010	VESDAnet Interface Card (VIC) - a simple interface card for the range of VESDA VLF smoke detectors. It provides seamless VESDAnet communication from the detector to other VESDAnet devices, including configuration and monitoring tools.
	VIC-020	VESDA VLF Multi-function Control Card (MCC) for the range of VESDA VLF smoke detectors. It provides additional 2 relays and 1 General Purpose Input (GPI).
	VIC-030 *	VESDA VLF MCC with Monitored Powered Output (MPO) for the range of VESDA VLF smoke detectors. It provides all the features of the VIC-020 with an additional Relay which can be programmed as an MPO.

* Not approved for UL or ULC installations.

Programming Options

The PC - Link HLI connects a PC and VESDA system. Each PC - Link HLI includes two cables (It does not include a PC):

- RS232 from HLI to PC Com port
- RS485 from HLI to VESDAnet Socket

Product Image	Ordering Code	Description
	VHH-100	Hand held Programmer including Lead for temporary connection of a programmer to a network via a VESDAnet socket.

FAAST FLEX ASD

Description

Conventional FAAST FLEX

The FLEX Series is part of the Fire Alarm Aspiration Sensing Technology® (FAAST) family. FAAST FLEX provides consistent detection with minimum nuisance alarms to reduce operational costs enabled by improved detection chamber design. The system continuously draws air from the monitored environment through a series of sampling holes to monitor the environment for smoke particulate.

The Conventional FAAST FLEX has two channel capability with two high sensitivity smoke sensors in separate chambers (one sensor for each channel).

Addressable FAAST FLEX

Addressable FAAST FLEX offers a highly flexible and cost-effective ASD solution for a wide range of applications such as small to medium warehouses, cold storage, elevator shafts, ceiling and underfloor voids, transformer and electrical rooms, restrooms and the like. Addressable FAAST FLEX provides consistent detection with minimum nuisance alarms to reduce operational costs enabled by improved detection chamber design.

Addressable FAAST FLEX offers flexible configuration options. Users can choose an out-of-the-box solution with a 10-line DIP switch with no special tools required, or the extended mode using the SmartConfig BT app and FACP, which expands the range of available settings.

Addressable FAAST FLEX is easy to install with reduced effort and time; 1-man installation with an installation template, different orientations, direct wall-mounting and ample room for wiring.

Through its modular design and field replaceable components, Addressable FAAST FLEX allows convenient in-field service and maintenance, thus minimizing downtime and reducing ongoing maintenance costs.

Addressable FAAST FLEX features a clean, functional interface with 1 power LED, 1 fault LED, and for each channel, 1 alarm LED plus 1 module LED (blinking when polling), refer to the Product Guide (Doc. No. 38064) for details. Upon opening the main cover, the command interface is revealed: 10 DIP switches for configuration, 4 buttons for interaction, and 1 USB port for log download and firmware upgrade.

How it works

Air is drawn into the FAAST FLEX through a network of air sampling pipes by speed adjustable aspirator. Each pipe inlet has an airflow sensor that monitors airflow changes in the pipe. Inside the FAAST FLEX, a sample of air is filtered and passed into the detection chamber and analysed for the presence of very small amounts of smoke. Air is exhausted from the FAAST FLEX and may be vented back into the protected zone.

Detection Technology

The FAAST FLEX detection technology a LED based light scattering technology. The technology offers high sensitivity IR LED and high gain IR receiver in addition to dual stage mesh filtration for removing dust particles and lint from air sample as well as preventing foreign objects from entering the exhaust.

Applications

- Warehouse / Logistics (small to medium)
- Cold Storage and Refrigerated Facilities
- Elevator Shafts
- Ceiling and Underfloor Voids
- Transformer, Electrical and Generator Rooms
- Rest Rooms
- Low Noise Environments

FAAST FLEX Products List

Conventional FAAST FLEX

The FAAST FLEX is an ASD that provides early warning detection using a dedicated high sensitivity smoke sensor. The FAAST FLEX is available as a one channel or two channel detector, Each sensing channel consists of an inlet, a metallic filter, a sensing element and a flow monitoring system. The product has a single aspirator and a single exhaust outlet. The FAAST FLEX is powered by an external 24 VDC power supply. Front panel LEDs indicate power, fault, and alarm status, and fault relays are activated in normal operation, and open in the event of a fault to notify monitoring systems. One GPI is also provided.

The FAAST FLEX is designed to protect an area up to 1600m² for 1 channel models and 2000 m² for two channel models. The product is designed to be compliant with EN54-20 Class A, B, and C sensitivity requirements.

Addressable FAAST FLEX

Addressable FAAST FLEX provides a flexible and cost-effective ASD solution designed for a broad range of applications, delivering consistent performance with reduced nuisance alarms through its enhanced detection chamber. It supports both quick setup using a 10-line DIP-switch configuration and extended programming via SmartConfig Bluetooth App and FACP. The Addressable FAAST FLEX uses LED light-scattering technology, combining a high-sensitivity Blue LED and photodiode with a dual optical path to enhance smoke detection performance.

Addressable FAAST FLEX supports coverage up to 1600 m² for single-channel models and up to 2000 m² for dual-channel models.

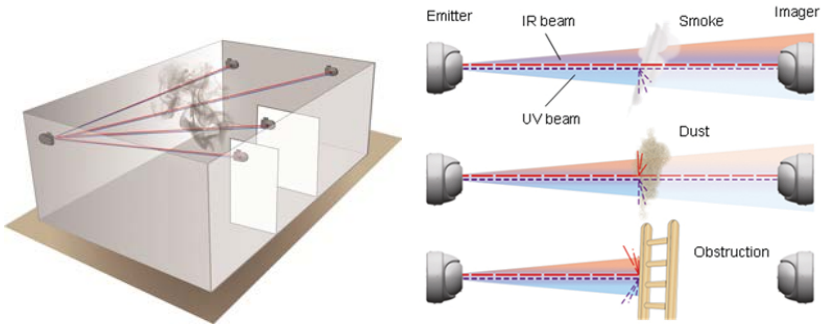
OSID Open-Area Smoke Imaging Detection

OSID-DE Dual-ended smoke imaging detector

The dual-ended, OSID-DE (OSI-10 and OSI-90), combines dual frequency (IR and UV) beams with a CMOS Imager detector. OSID-DE operates in both pitch dark as well as bright sunlight. With this new award winning technology also comes; high tolerance to vibration and structural movement as well as good resistance to transient dust, fogging, steam, reflections and object intrusion. On-board log memory for diagnostic purposes completes the picture. The OSI-90 Imager (receiver) can have up to seven emitters and provides easy 3D coverage for atria, domes etc. Fast and easy installation is an extra perk.

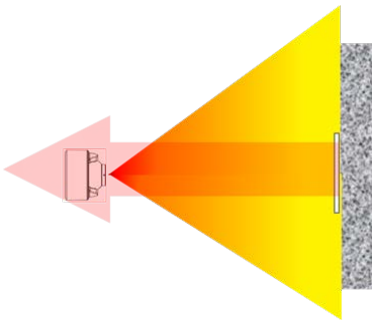
True spatial detection



OSID-R

Reflective smoke imaging detector

OSID-R is a single IR beam using also a CMOS imager for signal analysis which provides greater levels of information for better decision making than any simple and basic IR photocell receiver technology. It features good tolerance to structural movement, reflections and object intrusion.



Applications

- Shopping Malls
- Long Corridors
- Airport Terminals and Train Stations
- Heritage Buildings
- Suspended Ceilings
- Challenging Logistics
- Indoor Stadiums and Arenas
- Dirty Environments
- Hotel and Office-tower Atriums
- Churches and Cathedrals
- Exhibition and Convention Centers
- Industrial and Manufacturing Facilities

OSID Product List

OSID-DE	
	OSID-DE is a new innovation in projected beam smoke detection technology. By using advanced dual wavelength projected beams and optical imaging technology for early warning smoke detection, OSID-DE provides a low-cost, reliable and easy-to-install solution that overcomes typical beam detection issues such as false alarm incidents and alignment difficulties.

ASD Combined with Gas Monitoring

ASD with Gas Detection and Environmental Monitoring

As the world's leading manufacturer of ASD solutions, Xtralis has introduced the VESDA Sensepoint XCL gas detector that connects to Xtralis ASD systems to deliver superior gas detection via multiple hole (multi-point) sampling.

VESDA Sensepoint XCL:

- Leverages existing VESDA ASD pipe networks to cost effectively detect both smoke and gas in addition to providing environmental monitoring
- Provides detection for multiple gases through simple expansion without major construction or retrofitting
- Conditions the air to remove dirt, particulates, moisture, poisonous agents, and cross-interference gases
- Suitable for harsh environments
- Provides non-intrusive detection for aesthetics or to prevent vandalism
- Enables centralized monitoring and communication with building systems for real-time awareness
- Easily integrates with Fire Alarm Control Panel (FACP)/ PLCs/ HVAC/ BMS
- VSC and VSM4 integration for remote access to detectors (Modbus version) operating status

How VESDA Sensepoint XCL - Large Bore Works

VESDA Sensepoint XCL – Large Bore is designed to be incorporated to existing or new ASD pipe networks without major construction or electrical cabling / conduit and utilizes the flow in the pipe for the continuous delivery of air samples to the gas sensor for analysis. It is capable of remote sampling which means the detector can be placed outside the detection zone at a convenient location saving time and money for routine maintenance & service. Air drawn to the detector can be conditioned to remove contaminates which ensures detector maintains reliable long-term performance in a wide range of environments.

A single VESDA Sensepoint XCL – Large Bore detector delivers multi-point gas sampling capability giving it the advantage of providing greater coverage area, increased design flexibility and reliable detection in high airflow areas when compared to fixed point gas detectors.

How VESDA Sensepoint XCL - Micro Bore ASD System Works

VESDA Sensepoint XCL detector can be added to existing or new VESDA-E VEA tube network installations to actively monitor for gas leakages and build-ups. It integrates with other building systems, including fire alarm control panels, PLCs, HVAC and building management systems, and provides real-time situational awareness for intelligent emergency response. VESDA Sensepoint XCL – Micro Bore ASD System provides significant installation and routine maintenance cost savings by providing easy access to diagnostic information for servicing. Sensor cartridges are easily replaced in the field through simple steps.

Applications

- Battery rooms for the detection of hydrogen
- Boiler rooms for the detection of natural gas or LPG
- Control centers in refineries for detection of methane or hydrogen sulfide ingress
- Road tunnels for the detection of carbon monoxide and nitrogen dioxide
- Building utility rooms for the detection of natural gas or LPG
- Elevator shafts for the detection of methane or carbon monoxide
- Warehouse roof spaces for the detection of natural gas from space heaters
- Laboratories for the detection of various flammable and toxic gases
- Enclosed vehicle parking/loading docks for the detection of carbon monoxide and nitrogen dioxide
- Indoor air quality monitoring
- Beverage distilleries
- Detection of various combustible gases in fuel storage areas
- Monitoring of oxygen levels and detection of toxic gases in confined spaces
- Food & beverage for the detection of alcohols and carbon dioxide
- Detection of refrigerant leakage in refrigerated systems
- Greenhouses for the monitoring and control of carbon dioxide levels
- Bus and Train Locomotive Depots
- Universities and schools
- Commercial premises
- Hotels, Hospitals, Residential

How VESDA Sensepoint 301C Gas Controller and VESDA Sensepoint 301R Relay Module X8 Works

The VESDA Sensepoint 301C Gas Controller enables centralised configuration and monitoring of VESDA Sensepoint XCL – Large & Micro Bore (Modbus) gas detectors.

The controller connects up to 96 VESDA Sensepoint XCL (Modbus version) detectors and provides 4 programmable relays (alarms, faults) for installations requiring additional relay outputs – additional 16 relay outputs can be provided through the VESDA Sensepoint 301R X8 Relay Module.

VESDA Sensepoint XCL Products List

VESDA Sensepoint XCL- Micro Bore ASD System

Xtralis the manufacturer of the market leading VESDA ASD technology has developed with its sister company Honeywell Analytics a new concept of aspirated gas detectors. When used with the VESDA-E VEA; VESDA Sensepoint XCL provides early warning of the presence of gases for occupant protection and system monitoring whilst at the same time ensuring protection against fire threats. Through its embedded Bluetooth interface, VESDA Sensepoint XCL detector enables customers to pair the gas detector with their smart device applications to perform installation, commissioning and maintenance. This ensures a faster VESDA Sensepoint XCL installation, rapid configuration, simplicity to operate, and simplified maintenance.

VESDA Sensepoint XCL- Large Bore

VESDA Sensepoint XCL – Large Bore is a gas detection solution that utilizes the ASD pipe network to deliver superior gas detection via multiple hole (multi-point) sampling. The combined solution provides reliable detection of gases for occupant protection and process monitoring whilst simultaneously ensuring protection against fire threats.

The VESDA Sensepoint XCL – Large Bore portfolio has a range of gas sensors that addresses a wide range of applications and through its Bluetooth interface can be paired with a smart device for commissioning and maintenance. The smart device application (Sensepoint App) provides quick access to detector diagnostic information and simplifies detector configuration, calibration and bump testing.

VESDA Sensepoint Gas Controller and Relay Module Products List

VESDA Sensepoint 301C Gas Controller

The VESDA Sensepoint 301C Gas Controller enables centralised configuration and continuous monitoring of VESDA Sensepoint XCL – Large & Micro Bore (Modbus) gas detectors.

The controller uses an addressable RS-485 communication protocol, (daisy chain wiring) that connects up to 96 VESDA Sensepoint XCL (Modbus version) detectors, it provides 4 programmable relays (alarms, faults) for VESDA Sensepoint XCL gas detector installations requiring additional relay outputs – additional 16 relay outputs can be provided through the (optional) VESDA Sensepoint 301R Relay Module x8.

The controller offers automatic sensor identification and unique zoning capabilities permitting the grouping of multiple VESDA Sensepoint XCL detectors gas readings giving the flexibility to match the needs of different installations.

Li-ion Tamer GEN 3 Lithium Ion Off-Gas Detection System

The Li-ion Tamer GEN 3 is a device that detects the venting of battery electrolyte solvent vapours (off-gassing phase) that occurs early in the failure mode of lithium-ion batteries (LIB). The early detection of this event allows proper mitigation steps to be taken to avoid a catastrophic thermal runaway failure.

The Li-ion Tamer GEN 3 system is designed to be easy to install and configure, consisting of several components: (i) sensors, (ii) hub, (iii) power switch, (iv) network switch, (v) controller.

- Each sensing node comprises an off-gas sensor with advanced algorithms making it acutely sensitive to detecting battery electrolyte vapours (off-gassing compounds), does not require calibration, is compatible with all LIB form factors and chemistries, and has a lifetime comparable to a typical LIB system. The sensing node also includes temperature and humidity sensors for environmental monitoring.
- Sensing nodes are networked by the hubs and switches to the controller, which is the central point for managing and monitoring the entire system. The controller has relays and Modbus TCP/IP outputs that connect to the BMS or other control systems.

Applications

- Stationary Battery Energy Storage
  - Containerized / modular systems
  - Built environment systems
- Data Centers
  - Battery UPS
- Manufacturing - Gigafactories
  - Assembly lines
  - Battery formation process
  - Cell aging and EOL testing
  - Module or pack assembly
- Automotive
  - Vehicle test facilities
- Laboratory Safety
  - Environmental chambers
  - Battery abuse testing
- Shipping and Storage
  - Post-manufacturing storage
  - Battery-powered equipment

Li-ion Tamer Product List

Li-ion Tamer GEN 3			
	The Li-ion Tamer GEN 3 system is a safety product that has been developed for the protection of lithium-ion batteries. The key to Li-ion Tamer's GEN 3 value proposition is the earliest warning of battery failures by monitoring for single cell off-gas events and the scalable deployment of gas sensors for cost effective protection of battery installations. Additionally, temperature and relative humidity measurements provide environmental sensing at every sensing node.

Li-ion Tamer Sensor MOS

The Li-ion Tamer Sensor MOS is a device that detects the initial venting of battery electrolyte solvent vapours (off-gassing phase) that occurs early in the failure mode of lithium-ion batteries. The early detection of such events allows proper mitigation steps to be taken to avoid a catastrophic thermal runaway failure. It is also capable of detecting hydrogen gas, which is generated during thermal runaway of lithium-ion batteries. The detection of hydrogen allows proper management of flammable gas accumulation to avoid explosive conditions.

Li-ion Tamer Software

Software	Description
 Li-ion Tamer Interface Module Config Software	Setup and commissioning of the Li-ion Tamer Sensor MOS is done by the Interface Module configuration tool “Li-ion Tamer Interface Module Config Software”. With the configuration tool, the user can read the current status of the Li-ion Tamer Sensor MOS Firmware version, Modbus address and Alarm relay configuration. The user also has the option to change the address of the Interface Module in a network, and change the configuration of the Alarm relay from its default settings. This Config Software is available for download from www.xtralis.com.

Xtralis VIS-IR Failsafe Bi-Spectral Thermography Detector

The Failsafe Thermography Detector (FTD) is a bi-spectral (IR & Visual) smart edge device that has been specifically designed for early warning heat-detection. It can directly communicate with FACP for Pre-Alarm, Alarm and Fault conditions. The thermography detectors provide fire detection solutions where traditional smoke/fire detectors cannot cope with high smoke and dust conditions as part of normal operating conditions. Their applications target the critical infrastructures and challenging environments such as: waste recycling, tunnels, machine and process supervision, power stations, etc.

Applications

- Waste management and recycling sites
- Food and drink processing plants
- Industrial sites
- Transportation and other tunnels

Xtralis VIS-IR Failsafe Bi-Spectral Thermography Detector	
	Xtralis VIS-IR is a Failsafe bi-spectral standalone smart edge detector that has been specifically designed for early warning heat-detection with immediate visual verification using ViSM (VIS-IR Software Management tool). Xtralis VIS-IR communicates directly with any industry standard FACP using on-board Pre-Alarm, Alarm and Fault relays avoiding the ever-present failure risk associated with traditional smoke/fire detectors that cannot perform detection on the edge, and cannot cope with high smoke and dust conditions as part of normal operating conditions.

Xtralis VIS-IR Software

Software	Description
 VIS-IR Software Management (ViSM)	Xtralis ViSM can be used to configure up to 8 cameras (one by one, not simultaneously) and give 8 feeds possibilities for monitoring purposes through laptop in real time. It is easy-to-use and has been designed to provide operator complete control. The software allows to set the detection ROI, different detection area settings (spot, line, polygons, etc.), pre-alarm and alarm levels, color scheme selection, logging and communication. While the detectors fully operate on their own, very useful diagnostic data can be collected from the detectors for further analysis. ViSM is available for download from www.xtralis.com.

Style STX Series Power Supplies

VESDA-E Power Supply Units are uniquely designed to complement the style and appearance of VESDA-E ASDs and are technically matched to provide sufficient current and battery charging capacity to meet the requirement of EN 54-4. The STX variants are VdS approved and CE marked to EN54-4 so are particularly suitable for use in territories where these approvals are required.
