

End of Life Notice

Product End of Life Notice: OSID Reset Station (OSI-RS)

September 07, 2017

The OSI-RS build and construction processes are no longer compliant to the Honeywell approved manufacturing process and hence OSI-RS is discontinued with immediate effect from all regions.

An alternative has been sourced using an existing sustainable Honeywell product for the OSID reset accessory.

This product is the Reset and Test Station unit (part number: RTS151KEY) for flush mount applications and the Reset and Test Station including back box (part number: RTS151KIT) for surface mount installation.

These products have been tested and are fully compatible with the OSID range of Imagers.

Both products are available through the Xtralis sales channels.

For pricing, please contact your Xtralis Regional Sales Manager. Technical data sheet and installation sheet are available on the Xtralis website.

Discontinued Part Number	Description	Replacement Part Number	Description
OSI-RS	OSID Reset Station	RTS151KEY	Imager Reset Station - Flush Mount
		RTS151KIT	Imager Reset Station - Surface Mount
