

End of Life Notice

Product End of Life Notice: VESDA AOM (VRT-A10) January 16, 2018

Overview

As a result of the ongoing review of the VESDA Aspirating Smoke Detection (ASD) portfolio we have identified the Analog Output Module (AOM), part number VRT-A10, as a very slow moving part, and therefore this item shall be discontinued. This allows us to focus on serving our customers with our existing world leading ASD offerings and delivering new solutions and technologies to the market.

Affected Products

This notice affects the VESDA AOM product, part number VRT-A10. No other products are impacted by this notice. Note there is no direct replacement for the AOM from the VESDA product portfolio.

A possible alternative is to use the VESDA Modbus High Level Interface (VHX-0420/VHX-1420) and integrate its smoke output with a third party device such as a Programmable Logic Controller (PLC), which can be set up to provide an analogue output.

Effective Date

The affected product will be discontinued with effect from the 1st April 2018. Where you have requirements for the discontinued product after that date, please place your Last Time Buy (LTB) orders before 15th March 2018.

Warranty Replacement

Xtralis will provide replacement of the discontinued product during the current warranty period for products that we have sold to you and for any longer period that we have contractually agreed with you.

Info/Questions:

Please contact your local Xtralis office for LTB and any other queries in relation to this notice.
