

End of Life Notice

Product End of Life Notice: E700-FILASSY

29th Mar 2018

Overview

As a result of the ongoing VESDA Aspirating Smoke Detection (ASD) portfolio review we have identified the E700-FILASSY in-line filter as a slow moving part and having an alternate offering (VSP-850) it shall be discontinued. This allows us to focus on serving our customers with our existing world leading ASD offerings and delivering new solutions and technologies to the market.

Affected Products

This notice affects the E700-FILASSY in-line filter only. No other products are impacted by this notice. Note the Xtralis In-line Filter (VSP-850-G / VSP-850-R) is a replacement for the E700-FILASSY in-line filter. The VSP-850 has seen a significant market uptake and application into a wide range of dusty environments globally.

The main applications, albeit limited, where the E700-FILASSY has been used, are those where chemical (corrosive) substances are present. An alternative chemical filter for the E700-FILASSY is described in the latest Chemical Filter Application Note (Doc. No. 14888), click [here](#) to download.

Effective Date

There are approximately 300 E700-FILASSY in-line filters currently in stock which will be discontinued upon stock depletion. Orders shall be fulfilled on First-In-First-Out basis until fully depleted.

Spare Parts

Xtralis will continue to provide the E700-FILASSY replacement filter elements (FIL-FOAM) until further notice.

Info/Questions:

Please contact your local Xtralis office for any queries in relation to this notice.
